

ABSTRACT OF THE DISCLOSURE

A foldable candle tool is presented that includes a pair of handles with each handle having an open channel. A wick cutter having a pair of jaws pivotally connected about a pivot pin and includes a pair of legs with each leg being pivotally connected to one end of one handle such that the handles are effectively coupled together by the wick cutter. Further, the handles are moveable between a closed position and an open position. In the closed position, the open channels of each handle face each other and the wick cutter is at least partially housed within the channels. A plurality of additional candle tools are moveably mounted to the handles with each additional candle tool being moveable from a stored position within one channel to a position where the candle tool projects outwardly from the channel.
